EDUCATION

Netaji Subhas University of Technology, Delhi

Aug 2023 – May 2027

B.Tech in Instrumentation and Control Engineering (7.0 CGPA)

Indian Institute of Technology (IIT), Madras

Sept 2023 – Dec 2027

BS in Data Science and Applications

PROFESSIONAL EXPERIENCE

Web Developer & Gen-AI intern

May 2024 – July 2025

Dattopant Thengadi Foundation, Hybrid

- Developed and maintained a production-ready **AI RAG-agent** to automate contextual data retrieval, successfully deploying the full-stack FastAPI and Ollama backend on an Ubuntu **VPS** using Uvicorn, PM2, and Nginx.
- Improved website performance scores by **11%** (from 74 to 85) on Hostinger by developing optimized, custom PHP and JavaScript plugins to dynamically fetch social media data and improving UI/UX.

PROJECTS

Sportify | [GitHub](#)

Sep 2025

Tech Stack: FastAPI, NodeJs, ExpressJS, React-Native, PostgreSQL

- Deployed a full-stack AI platform to evaluate athletic potential, integrating the core ML model with a robust FastAPI backend and React-Native frontend.
- Achieved an **89%** accuracy rate in sports video analysis by engineering a custom machine learning pipeline using Python, TensorFlow (MoveNet) and MediaPipe.

IEMO | [GitHub](#)

Jan 2026

Tech Stack: FastAPI, ReactJS, ExpressJs, Supabase, LLMs, Langchain

- Automated intelligent email organization by developing a context-aware AI agent, utilizing the Gemini LLM and LangChain to parse and structure complex inbox data streams.
- Ensured secure, scalable application architecture by leveraging Google Cloud Platform (GCP) for OAuth integration and managing state with ReactJS and Supabase.

OpenEnv SOC Analyst | [GitHub](#)

April 2026

Tech Stack: Python (uv), FastAPI, Docker, OpenEnv, Hugging Face

- **Engineered an autonomous SOC Analyst simulator** utilizing OpenEnv and FastAPI, containerizing and deploying the live SIEM evaluation server to Hugging Face Spaces.
- **Designed a mathematical grading engine** applying a continuous linear decay function to dynamically score agent efficiency and speed across multi-step kill chains.

Vehicle Maintenance App (Freelance)

Jan 2026 – Aug 2026

Tech Stack: Electron-builder, Vanilla-JS, TailwindCSS, SQLite3

- Developed an offline-first Electron desktop application designed for the 15th Battalion, Brigade of the Guards.
- Assured a centralized hub for managing vehicle fleet operations, driver training, equipment maintenance, and administrative tracking.

TECHNICAL SKILLS

Languages: Python (proficient), JavaScript (intermediate), C++ (beginner), PHP (beginner)

Frameworks: ReactJS, NodeJS, React-Native, ExpressJS, Django, Tensorflow, Scikit-learn, OpenCV

Databases: MongoDB, PostgreSQL, MySQL, LanceDB, Kubernetes, Docker

Cloud Platforms & Other Tools: GCP, AWS, Linux (Ubuntu), Nginx, Postman

KEY ACHIEVEMENTS

- **Top 10 Finalist, Adobe Add-on Hackathon** (Feb 2026) – Built a RAG-based add-on for Adobe Express to automate and summarize complex workflows.
- **Finalist, Economic Times AI-Hackathon** (July 2026) – Created a geo-spatial global energy supply chain tracker and risk mitigation application.

POSITIONS OF RESPONSIBILITY

- **Co-Founder, HASI Patna** (2020) – Coordinated COVID-19 relief operations, directly impacting 200+ lives by managing a 500-person volunteer network to distribute verified medical leads.
