EDUCATION

Netaji Subhas University of Technology, Delhi

Aug 2023 – May 2027

B.Tech in Instrumentation and Control Engineering (7.0 CGPA)

Indian Institute of Technology (IIT), Madras

Sept 2023 – Dec 2027

BS in Data Science and Applications

PROFESSIONAL EXPERIENCE

Web Developer & Gen-AI Intern

May 2024 – Jul 2025

Dattopant Thengadi Foundation, Hybrid

- Administered an **Ubuntu-based Hostinger VPS** for end-to-end deployment, configuring Nginx as a reverse proxy and utilizing PM2/Uvicorn for robust lifecycle management of backend services.
- Successfully deployed a production-ready AI RAG agent and optimized server-side scripts, reducing latency and boosting website performance scores by **11%** (from 74 to 85).

PROJECTS

OpenEnv SOC Analyst | [GitHub](#)

Apr 2026

Tech Stack: Docker, Python (uv), FastAPI, OpenEnv, Hugging Face

- Containerized** a live SIEM evaluation server and autonomous SOC Analyst simulator using Docker, streamlining environment dependencies and ensuring consistent cross-platform execution.
- Automated cloud deployment** of the evaluation architecture to Hugging Face Spaces using Astral's uv for lightning-fast Python dependency resolution.

IEMO | [GitHub](#)

Jan 2026

Tech Stack: GCP, Supabase, FastAPI, Node.js, React.js, LLMs

- Architected a secure, cloud-native application utilizing **Google Cloud Platform (GCP)** for identity management (OAuth) and Supabase for managed backend services and state management.
- Integrated Gemini LLM APIs via LangChain to automate complex inbox data parsing, deploying the backend on FastAPI to handle high-throughput request streams.

Sportify | [GitHub](#)

Sep 2025

Tech Stack: Hugging Face, PostgreSQL, FastAPI, Node.js, React Native

- Deployed the core machine learning inference pipeline (TensorFlow/MediaPipe) to **Hugging Face Spaces**, decoupling ML workloads from the main application to ensure isolated and scalable compute.
- Engineered a resilient backend architecture using FastAPI and PostgreSQL, optimizing Node.js API routing to serve real-time video analysis with an **89%** accuracy rate.

Vehicle Maintenance App (Freelance)

Jan 2026 – Aug 2026

Tech Stack: SQLite3, Electron-builder, Vanilla JS, Tailwind CSS

- Packaged and distributed an offline-first desktop application utilizing Electron-builder, designed specifically for the 15th Battalion, Brigade of the Guards.
- Configured a robust local database schema utilizing SQLite3 to act as a centralized hub for tracking vehicle fleet operations, service logs, and equipment maintenance.

TECHNICAL SKILLS

Cloud & DevOps Tools: Docker, Kubernetes, AWS, GCP, Linux (Ubuntu), Nginx, PM2, Uvicorn, Postman

Databases: PostgreSQL, MySQL, MongoDB, SQLite3, LanceDB

Languages & Scripting: Python, Bash, JavaScript, C++, PHP

Frameworks & APIs: FastAPI, Express.js, Node.js, Django, React.js, TensorFlow

ACHIEVEMENTS & LEADERSHIP

- Top 10 Finalist, Adobe Add-on Hackathon** (Feb 2026) – Built a RAG-based add-on for Adobe Express to automate and summarize complex workflows.
- Finalist, Economic Times AI Hackathon** (Jul 2026) – Created a geo-spatial global energy supply chain tracker and risk mitigation application.
- Co-Founder, HASI Patna** (2020) – Coordinated COVID-19 relief operations, directly impacting 200+ lives by managing a 500-person volunteer network to distribute verified medical leads.
